

# Anti-Measles IgM ELISA

**Domain:** Diagnostic Assay/Kit

**About Technology:** This Anti-Measles IgM ELISA kit uses inactivated measles antigen to qualitatively detect measles-specific IgM antibodies in human serum. The assay supports early diagnosis of measles, helping identify recent or active infections.

**Intended Use:** Qualitatively detects Measles IgM antibodies in serum, aiding presumptive diagnosis during outbreaks and in clinical settings

**Advantages:**

- Indigenous kit, can be used for early diagnosis of Measles virus
- User friendly sensitive and rapid test
- Cost effective

**IP Status:** NA

**Development Status:** Third party validation complete

**Technology Transfer Status:** Transferred to companies on Non-Exclusive basis (Some licensees have already received Manufacturing License from CDSCO)

**Institute(s):** ICMR-National Institute of Virology(NIV)

**Inventor(s):** Dr. GN Sapkal, S.R.Vaidya, D.T. Mourya
